Acknowledgement

I would like to express my special thanks of gratitude to my teacher Mr. Animesh regmi as well as our coordinator Mr. Roshan kc of virinchi collage.

Who gave me the golden opportunity to do this wonderful project of software development skill on the topic simple quiz game using C language which also helped me in doing a lot of research and I came to know about so many new things I am really thankful.

Secondly, I would also like to thank my parents and friends who helped me a lot in finishing this project within the limited time. I am making this project not only for marks but to also increase my knowledge.

THANKS AGAIN TO ALL WHO HELPED ME

Abstract

The creation and administration of a straightforward database for questions is the only reason this project is being considered. The "QUIZ" information for this project was prepared with the customer's context in mind. In this case, "QUESTION" uses a binary file to hold the data, and this database essentially serves as the MASTER file.

This interactive, user-friendly, and entertaining quiz game is made to help players learn more by having them take multiple-choice tests on a variety of topics. The user has the option to add and change questions as he pleases

INTRODUCTION

This "QUIZ GAME" project is made to allow users to create and manage a simple database of questions. The software generates the question number automatically, and it is saved in a binary file with the name "QUESTION." Essentially, this database serves as a MASTER file that may be utilized as a look-up table for data like Quiz Option, Sub-menu, either Computer/Mathematics/Science or General and the Return.

A quiz on any of these topics can be taken using the application's submenu, which includes themes like science, arithmetic, and computers. The user receives a score of 10 for each accurate response and a score of 0 for each incorrect response, and his overall score is then tallied.

Scope

There are many possibilities in the given project. Students must have these as they are very essential for their academic success.

- Testing the user's general knowledge.
- The purpose of the game is to entertain and reward the correct answer.
- In order to enhance the users' thinking abilities.
- Utilizing the users' free time.
- Textbooks should be minimized.
- Our goal is to create an environment where users can be better served.

MOTIVATION

The primary reasons for selecting this project were to create some form of entertainment and to offer some sort of activity in schools and colleges that tests students' general knowledge while also assisting in the acquisition of new knowledge. Because this activity is not readily available everywhere in the world, this small project can assist in testing students' knowledge while also creating entertainment and allowing us to or This quiz game mini-project is written entirely in

C and is intended to be a straightforward console application. In this project, a user is given a monetary prize after answering a series of questions.

In a quiz game, the questions are selected so that they include every aspect of a regular quiz competition. Quiz questions on science, technology, movies, sports, general health, geography, and many other topics are used to assess the user's general knowledge

Objective

The objective and scope of our project online quiz game is to record the details various activities of user and to provide better information for the user. The game offer five different subjects with several types of questions to give more information about that subject.

The main objective of the quiz game is to reduce the paper work and make it in the digital mode.

LITERATURE REVIEW

In general, everyone who has good general knowledge wants to play the quiz game; this can be done at home, at college, etc. The virtual quiz game provides some kind of entertainment. With the use of a digital quiz system, playing is considerably simpler and more enjoyable compared to playing on a virtual system. Simply choose your name and answer the question, and then there will be four options available to the user for selecting the answer. I have designed the options so they are convenient and comfortable for the user.

Statement of problem

We observe that, nowadays world is becoming more and more competitive and wide. To survive in this modern world. We should keep ourselves updated with knowledge of the all things.

Today the focus is given more on developing general knowledge and also it is seen that our young generations is more interested in competitive exam. It is not possible

to read all the theory contents in books and by reading books we can't remember 100% knowledge from that. People are more interest in playing game, videos, movies, etc. especially young generation. Hence, we decided to build project on quiz game, to increase the generation knowledge of user by means of entertainment.

The following are the project's main drawbacks:

- The proposed system will take less time than the current one.
- It consumes less and is more effective. The method of the quiz will be relatively simple under the new proposed approach.
- The game is entirely automated. As no information needs to be input, the suggested system is very error and mistake proof.
- Be manually entered, lowering the likelihood of human mistake. The player's database is kept in a record file.

Background of Study

A quiz is a form of game or mind sport in which players attempt to answer questions correctly about a certain or variety of subjects. Quizzes can be used as a brief assessment in education and similar fields to measure growth in knowledge, abilities, or skills.

In this quiz game project, you can store the user name, view the highest score secured by a user, and even reset the score. Additionally, to make the game look a little more interesting, it is divided into two rounds; user must pass the first round to reach the second one.

Of the 2 rounds I mentioned above, the first is called the Warm-up Round; the second is the Challenge round. In the warm-up round, the user is asked a total of three simple questions and they must be able to answer at least two of them correctly to enter the next round. If the user is not capable of doing that, he is not permitted to proceed further.

In the second and more interesting round of this quiz game in C, the user will be asked questions continuously, and for each right answer given, they will earn 100!

The game ends when the user's cash prize piles up to 1500. For each question asked, there are 4 options, namely A, B, C and D. There are no negative markings, so the user's accumulated cash money won't be deducted for wrong answers to the questions.

Flowchart

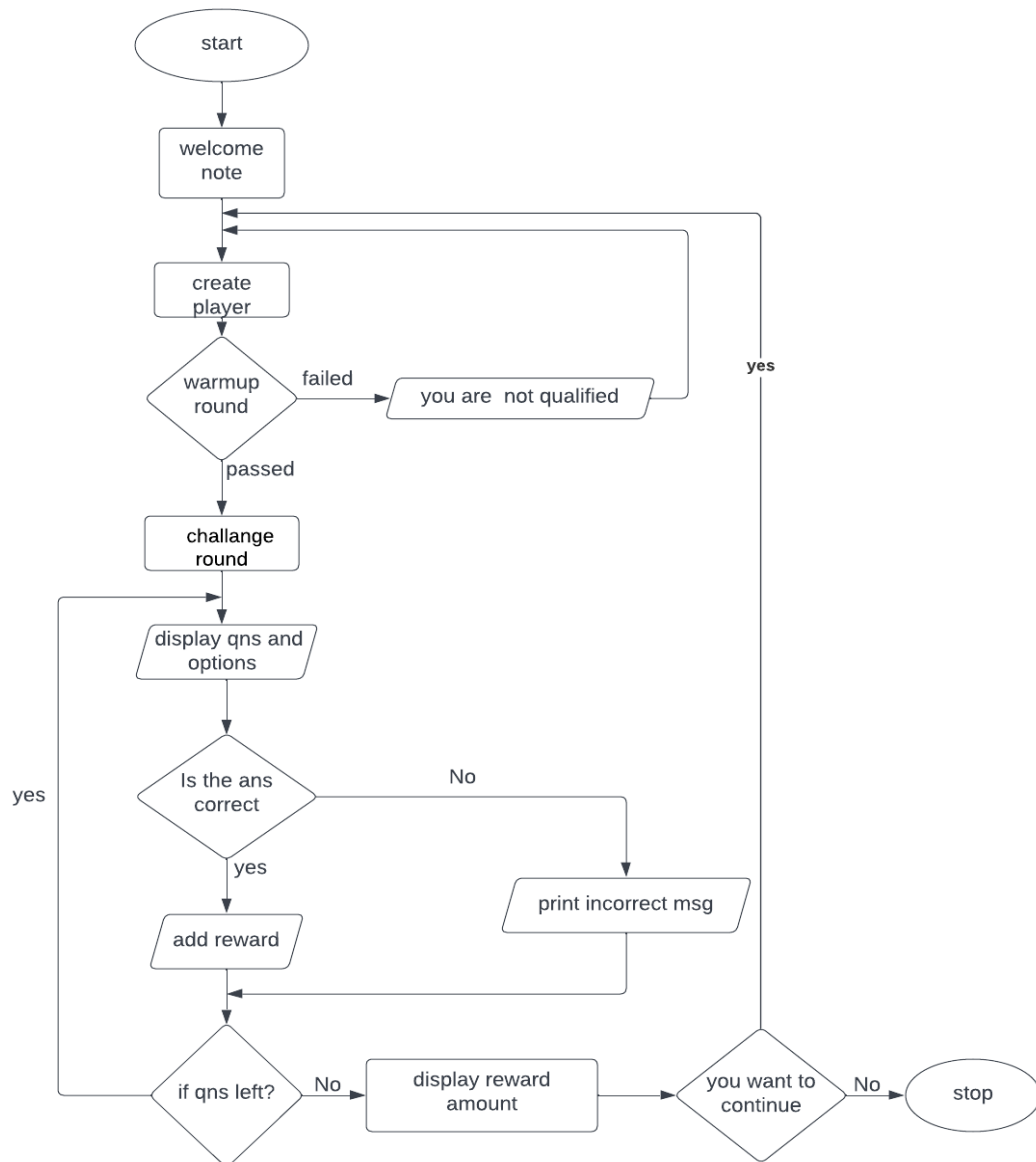

Figure 1. Flowchart of system

Algorithm

The algorithm of the entire system is given below:

- **Step 1:** START.
- **Step 2:** Display Welcome note.
- **Step 3:** create a player.
- **Step 4:** If you want to skip to warmup round?
 If yes, challenge the round
 If else display not qualified message.
- **Step 5:** Show questions and options.
- **Step 6:** If player chooses right option add reward else display reward amount.
- **Step 7:** Are there any question left?
 If yes , display next questions.
 If no , display record amount.
- **Step 8:** STOP.

Figure 2. Algorithm of program

Project Scheduling

Week	Work
Week 1 (June 5)	Research about the project.
Week 2	Proposal writing
Week 3	Start coding
Week 4	Complete code structure
Week 5	Review the codes
Week 6 & 7	Project report
Week 8 (July 25)	Project complete

IMPLEMENTATION

In this quiz game project in C, I have used file handling for reading and storing the Quiz questions asked during the game. I have used file only for recording the score secured or the amount of cash prize won by players.

- In the beginning of this system, you will be given attempts with string handling functions after logging in.
- In order to store, read, and write data in files, the program uses the concept of file handling.

FUTURE ENHANCEMENTS

The main aim of our project is create a good interaction between the student and teacher. We are trying to do the project at best level to satisfy all the end users (i.e, student / faculty). And we give the choice to student to add their name under the faculty who they wish and get advice for their betterment. In our future we are decided to provide more security to our website which may not be hacked. We can add printer in future. We can give more advance software for quiz game including more facilities. It will be more empowering. Next we are aiming to provide some online formula and notes in to our website.

Conclusion

After completion of this project we can play the Quiz game. Students will be benefited with this project. They can test their IQ level and collect some amount of money. This project can be hired by every School for learning purposes. The quiz game designed is very interactive, user friendly and easy to play. The game allows the user to choose the topic of his interest and test his knowledge. The question database can be easily modified like adding, deleting or changing the questions is very easy.

Output screen

----- Welcome niranjan chand to C Program Quiz Game -----
Here are some tips you might wanna know before playing:
-----
>> There are 2 rounds in this Quiz Game,WARMUP ROUND & CHALLENGE ROUND
>> In warmup round you will be asked a total of 3 questions to test your
    general knowledge. You are eligible to play the game if you give atleast 2
    right answers, otherwise you can't proceed further to the Challenge Round.
>> Your game starts with CHALLENGE ROUND. In this round you will be asked a
    total of 15 questions. Each right answer will be awarded Rs100!
    By this way you can win upto ONE THOUSAND cash prize in Nrs!!!!!!.....
>> You will be given 4 options and you have to press A, B ,C or D for the
    right option.
>> You will be asked questions continuously, till right answers are given
>> No negative marking for wrong answers!
!!!!!! ALL THE BEST !!!!!!!
Press Y to start the game!

Press any other key to return to the main menu!_

```
