

PROJECT PROPOSAL

SEMESTER I

C-PROGRAMMING PROJECT ON

Simple Quiz Game

BY:

Niranjan Chand

BACHELOR OF INFORMATION & COMMUNICATION TECHNOLOGY

SCHOOL OF SCIENCE & TECHNOLOGY

VIRINCHI COLLEGE

1. Introduction.....	1
1.1. Invitation	1
2. Purpose.....	1
2.1. Scope of Project.....	1
2.2. Features	2
3. Theory	3
3.1. Features of C	3
4. Algorithm.....	4
5. Flowchart	5
6. Project Scheduling	6
6.1. Project Scheduling (Diagram)	7
7. Conclusion	8
8. Expected Output.....	8
9. References.....	8

1. Introduction of the project:

The c programming language has already been studied, but now it is time to analyze real-life problems and see how we can approach them, we are going to use c programming to develop a real-life project using dev C++. c-programming ideas, which we learned from our respected teachers from Virinchi collage, are applied to this project in its entirety. We are making proper use of our programming ideas we have accumulated over a whole semester. So, this student attendance record project has also been developed using basic C Programming concepts.

1.1 Invitation:

In this document the purpose is to discuss the requirements for a project hotel restaurant menu project to C-Programming. It gives details about the food menu card. Teacher and consultants in charge of the Virinchi contributed to the development of this program as a result of this project, we have accumulated over the last half year. Student have the opportunity to demonstrate what they have learned.

2. Purpose of project:

Project objectives are to increase and test general knowledge of users in order to enhance, increase and improve the general knowledge of users. It is possible to test our general knowledge and earn rewards for correct. School children are the main focus of this project.

2.1 Scope of Project:

There are many possibilities in the given project. Students must have these as they are very essential for their academic success.

- Testing the user's general knowledge.
- The purpose of the game is to entertain and reward the correct answer.
- In order to enhance the users' thinking abilities.

- Utilizing the users' free time.
- Textbooks should be minimized.
- Our goal is to create an environment where users can be better served.

2.2 Features:

A brief description of the features of this program is given to the players. Players have access to the following features:

- User can run it anytime and play it.
- Consists of many option including start, view the highest score, restore the score, quit etc.
- User can get help from the “help” option.
- User can register his/her name.
- Basic instruction is highlighted before playing game.
- There will be warmup round and challenge round.
- To play challenge round user must pass the warmup round having 3 questions and user should make at least 2 correct answer.
- In challenge round you have 10 question and each correct answer will be awarded Rs.100.
- In this way, users can make total of Rs.1000.
- No negative marking for wrong answers.

3.Theory:

C is a widely used general-purpose programming language that is easy to learn and use. It is a machine-independent structured programming language that is widely used to create a variety of applications, operating systems, and other. It's a procedural programming. Dennis Ritchie created it for the first time in 1972. Its instructions comprise of phrases that resemble algebraic expressions, supplemented by English keywords like if, else, for, and do. As a result, C resembles other high-level structured programming languages such as Pascal and FORTRAN 77-C, allowing it to be used for both system and application development.

C was used to write the UNIX operating system, the C compiler, and almost all UNIX application applications. C has grown in popularity as a professional language. C-program compilers are widely accessible for computers with all of its interpreters. When compared to programs produced from other high-level languages, compilers are usually compact and build object programs that are small and extremely efficient.

3.1 Features of 'C' Programming Language:

- C is a simple middle-level language for expressing programming ideas in a form that many people are familiar with.
- C is in close proximity to the assembly machine. Pointers, bytes, and bit level manipulation are all supported.
- The C programming language allows the programmer to write directly to memory.
- It is machine Independent Language & is portable.
- It breaks down a program into discrete logical components that each perform a single task. It simplifies the program's modification.
- C provides a lot of inbuilt functions that makes the development fast.

4.Algorithm:

Steps	Algorithm
Step1:	Start
Step2:	Welcome to note
Step3:	Create a player
Step4:	If you want to skip to warmup round? If yes, challenge the round If else display not qualified message.
Step5:	Show questions and options
Step6:	If player chooses right option add reward else display reward amount.
Step7:	Are there any question left? If yes , display next questions. If no , display record amount.
Step8:	stop

5. Flowchart

Pictorial representation of this project is given below:

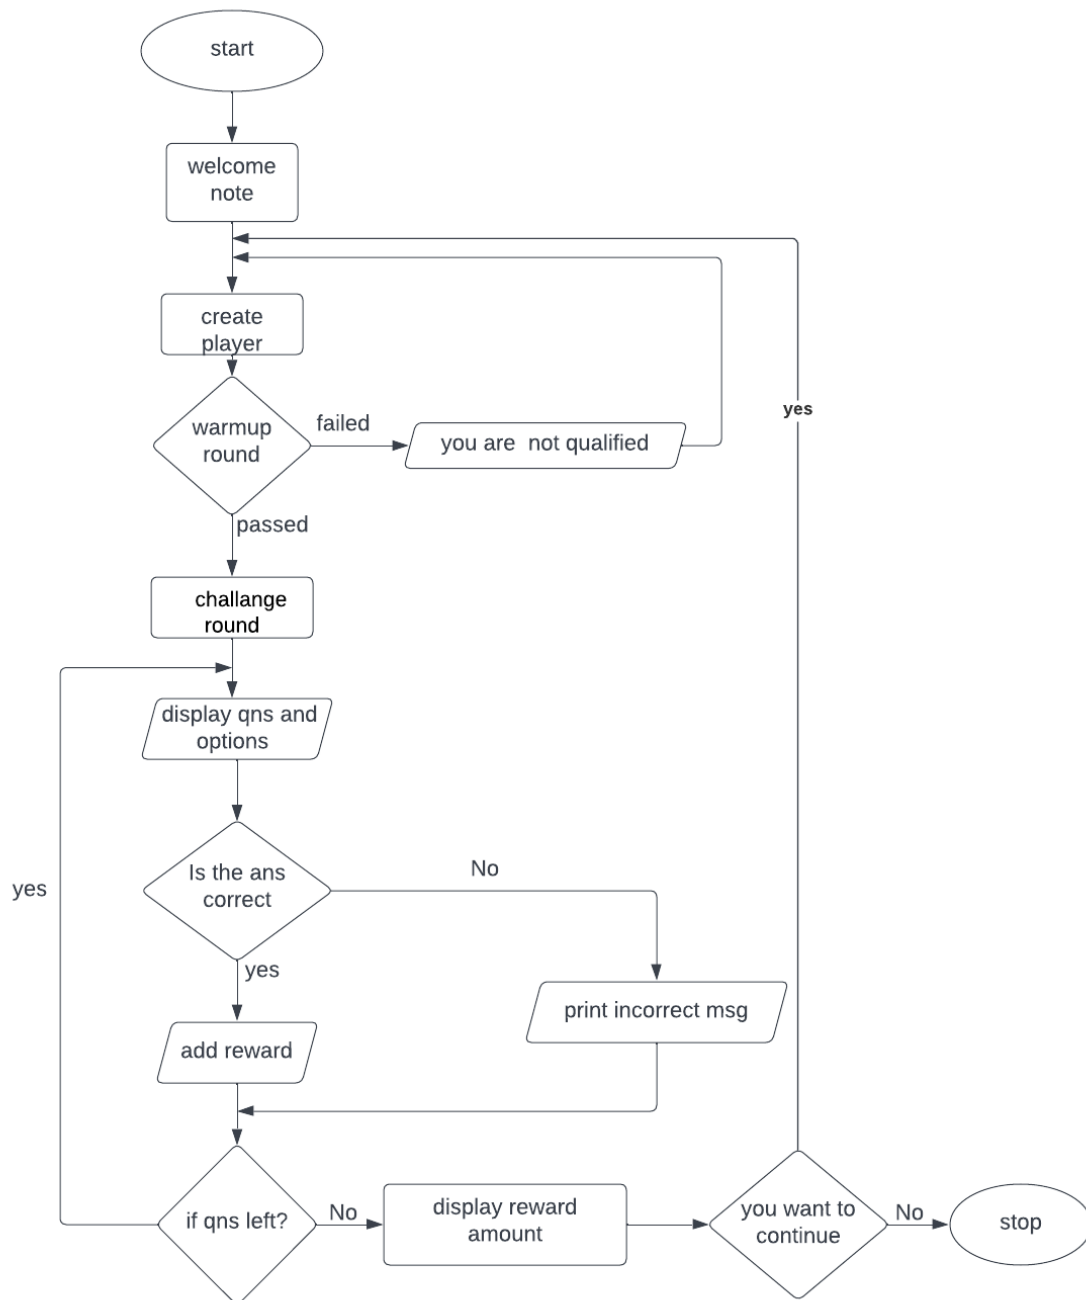

Figure 1Flowchart of Quiz game

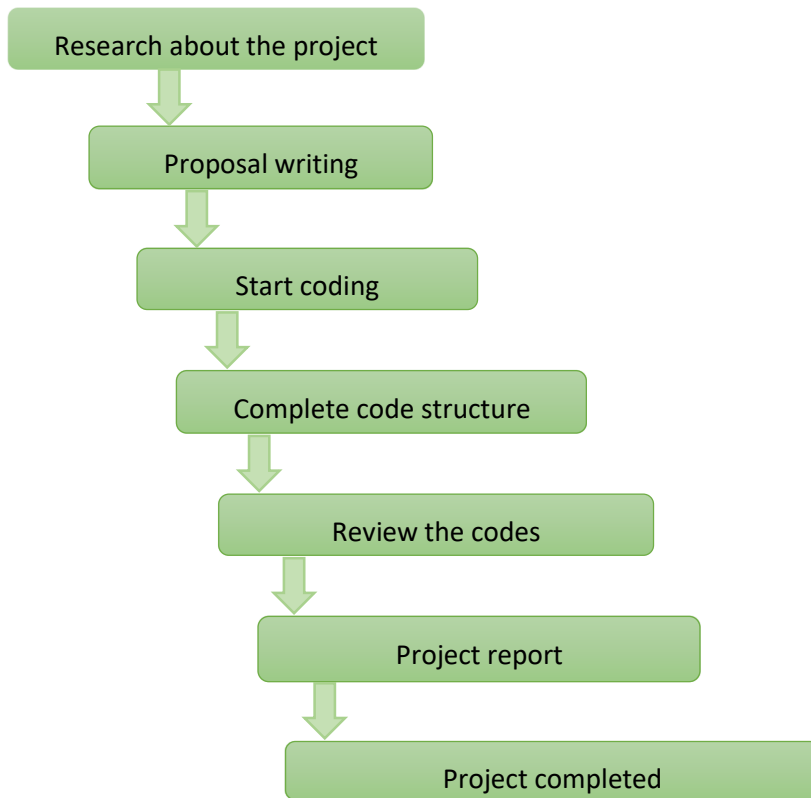

6. Project Scheduling

Our Project life-cycle took over weeks of scheduling which are as listed:

☐ Week 1:	Research about the project.
☐ Week 2:	Proposal writing
☐ Week 3	Started coding
☐ Week 4,5&6	Will complete code structure
☐ Week 7	Will Review the codes
☐ Week 8&9	Will submit project report
☐ Week 10	Will complete the project

6.1 Project Scheduling (Diagram)

The following figure shows the project-scheduling in diagram:

*Figure 2*Diagrammatical representation of project scheduling

7.Expected output:

Welcome To The Game

BECOME A RICH PERSON!!!!!!!!!!!!!!

- **Press S to start the game.**
- **Press V to view the highest score.**
- **Press R to reset score.**
- **Press H for help.**
- **Press Q to quit.**

8.Conclusion

After completion of this project we can play the Quiz game. Students will be benefited with this project. They can test their IQ level and collect some amount of money. This project can be hired by every School for learning purposes.
